

Perspective... Health is an individual's most basic, essential and valued asset
 Population Health is a precondition for economic development and prosperity

The Internet has changed the way we communicate, deliver goods and services, make decisions, and interact, but the underlying premises for healthcare delivery remain unchanged.

- Patient needs come first; access to care is critical.
- Health outcomes set gold standards of care.
- Resources are scarce; funds are limited.
- Governments, businesses and consumers prioritize health care expenditures

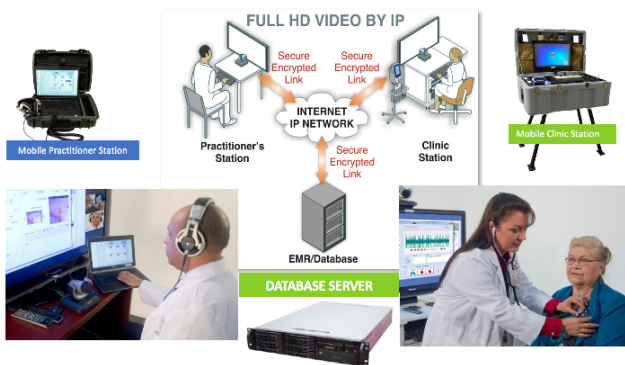

Nuvimedix®, A Movement Ahead

Through public/private partnerships, Nuvimedix® offers a virtual primary care platform to support access to care priorities and improve health outcomes, while generating operational efficiencies and cost savings. Our proprietary solution is a “care anywhere” approach, independent of distance or location, subject to sufficient Internet connectivity.

Telehealth Options for Continuum of Care

Nuvimedix® Basic: Remote telemedicine solution powered by 360PLUS™ proprietary, process software (standards-based)

Three Basic Components

Telehealth as a Service Options (360PLUSSM Deluxe and 360PLUSSM Premium)

- IT Contract Services
- Cyber Health Services*
- e-Health Contract Services
- Other (client-defined)

* Not available in the United States

Our Distinction: 360PLUS solutions build on your operational infrastructures and resources

Seven Key Questions for Successful Deployment

WHO	Government and community public and private organizations that have made healthy populations a priority
WHAT	Nuvimedix® Primary Care Telehealth (screening, health maintenance and chronic disease management)
WHERE	Independent of distance and location
WHEN	On demand, in real time, subject to Internet connectivity
WHY	Resolve barriers to access to care that impact health and health outcomes on both an individual and population level
HOW	Public / Private Partnerships
HOW MUCH	Your Priorities / Needs / Budget “Must Have” vs. “Nice to Have” <ul style="list-style-type: none"> • Nuvimedix® Basic • 360PLUSSM Deluxe • 360PLUSSM Premium

What Makes Us Unique?

You talk, and we listen. The Nuvimedix Virtual Primary Care Platform is provider- and patient-centric to complement and supplement practice settings, administrative and clinical workflow, and current telemedicine capabilities (if applicable). *360PLUS*[™] process software is our unique differentiator that allows the seamless integration and exchange of health data for patient encounters within your continuum of care parameters. Updates, upgrades, and modules can be added as Telehealth needs and requirements change. Most important, the software's open-architecture will facilitate adoption of new e-Health technologies as they become available.

Your Uniqueness

You talk, and we listen. Your uniqueness lies in knowing how your organization operates (runs), functions (behaves), and embraces change to augment value and achieve goals. Telehealth is an alternative healthcare delivery model. Successful deployment relies on answers to seven key questions (Who, What, Why, Where, When, How, How Much?). Realization of the benefits relies on answers to the same set of questions post-deployment. Your input is critical to accomplishing both goals.

Moving Forward

On one hand, telemedicine addresses access to care issues... on the other, it creates an issue of capacity. *360PLUS*SM Telehealth Contract Services can resolve those and similar issues.

Nuvimedix has developed toolkits to simplify the planning and deployment of primary care Telehealth at each point along the continuum of care spectrum. Our multidisciplinary team is on-call to provide end-to-end assistance in planning, configuring and implementing a virtual health program. Value-added services include custom programming to initiate service, on-site training, technical support, and client-tailored maintenance and service agreements.
